EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Jeff Williams on April 28, 2005. The application has been amended as follows:

In the claims:

Claims 13 and 20-22 are cancelled.

Claim 11 (currently amended)

A balancing device comprising: a platform having an engagement surface and an underside surface whereby a user may be positioned on said engagement surface; at least two pivot members, each having a rounded contact face for resting on a reference surface; and means for slidably mounting the pivot members to said underside of said platform such that the pivot members may be moved laterally to a first position proximal to one another and a second position distal to one another; whereby in the first position said pivot members combine to form a generally hemispherical fulcrum; and whereby the second position allows increased stability for the platform in one direction over said first position.

2. The following is an examiner's statement of reasons for allowance: although the prior art of Gottlieb shows a device having a platform with a bifurcated fulcrum, Stewart shows a device having a platform and rounded fulcrum, Atkinson shows a device having a platform and a wheel slidably on the underside of the platform, Hershey shows a device having separate stops slideable on the underside of the platform, Romero shows a device having a platform and a rounded fulcrum on the underside that is detachable, and Perrine and Marchu show devices having separate pivot members slideable on a rod and rollers, respectively, the prior art fails to teach or suggest singularly or an obvious combination of a device having a platform with a hemispherical fulcrum coupled to the bottom surface being bifurcated into separate pivot members where each pivot member has a contact face and movable between a first position where the members abut one another and being generally a continuous shape for resting on the reference surface and a second position where the pivot members are space from one another to present two separate half-dome shaped contact faces and where the pivot members are operable to provide increased stability for the platform in the second position as recited in claims 1 and 11.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
